CORSOURCE®

Ensure your ERP Successfully Streamlines Operations and Enhances Organizational Efficiency

CorSource is your next step to making your ERP vision a reality

Overcoming Failed ERP Projects

Implementing an Enterprise Resource Planning (ERP) system is a complex process that requires a well thought out plan, orchestrated change management, and specialized experts to ensure successful execution. This is the case when deploying an ERP system for the first time, upgrading to a major release, migrating from on-premise to a cloud-based version, or moving to a different vendor.

One of the key challenges, and reasons for failed projects, is the scarcity of qualified staff with expertise in both enterprise and small to medium business (SMB) ERP systems from vendors including WorkDay, SAP, Oracle, Microsoft, and Infor. Finding skilled professionals who can bridge the knowledge gap and ensure smooth implementation and operation of specific ERP systems poses a significant hurdle.
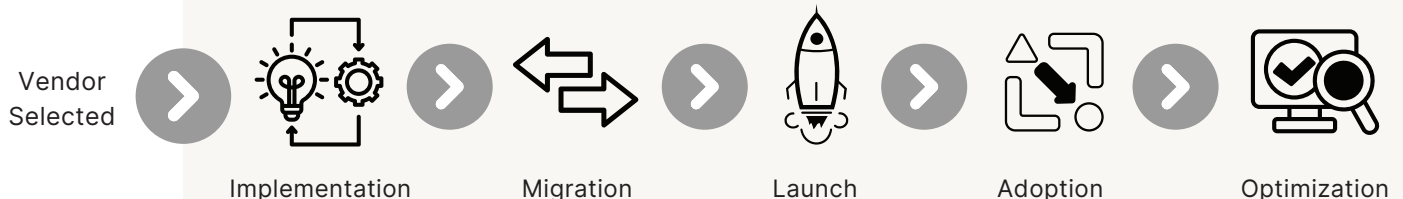

CorSource Supplies ERP Strategic Consultants and Subject Matter Experts

We have the project leadership and tactical execution experience to customize, integrate, and support your ERP implementation. A typical engagement starts after the ERP vendor selection process has been made. We become an integral team member working with internal departments as well as the ERP vendor and their certified implementation partner.

Typical Engagement Phases

Vendor Selected → Implementation → Migration → Launch → Adoption → Optimization

CorSource Engagement Phases

We offer a range of services encompassing both consulting and staff augmentation through the following phases:

- **Implementation**: We can provide strategic leadership to conduct a thorough assessment of current systems and processes. This will inform the needed customization to align with organizational requirements. It becomes the foundation to ensure that goals are met on budget and on time while reducing potential setbacks.

- **Migration:** We can help identify specific skills and staff required to customize and stand up the new ERP system. This involves coordinating extensive testing and user training sessions. We can also supply experts in data architecture, management, and administration.

- **Launch:** We can provide project leadership to ensure a timely launch and reduce the potential for business impacting disruptions as the cut over takes place.

- **Adoption:** From the implementation phase on, we can source resources for technical support and training. This is critical to ensure organization-wide user adoption and the proper support team to maintain momentum after the cut over.

- **Optimization:** After go-live, and the implementation partner is gone, we can stay involved by supplying day-to-day support experts, implementing monitoring safeguards, and staying on top of optimization opportunities.

Key Benefits

Our clients benefit from having a neutral and independent third party who can validate and augment the project plan, hold all parties accountable, and source the needed technical resources for staff augmentation and full-time roles.

We overome the challenges associated with finding experienced ERP professionals despite the aging workforce and having to compete for a limited talent pool. Our experience spans numerous projects delivering successful outcomes including:

- Develop and execute a plan that ensures success through all stages

- Access to a network of specialized IT professionals with expertise in popular ERP platforms

- Scalability and flexibility to meet fluctuating demands during the project phases

- Source singular consultants to assist HR, Talent Management, Finance, Procurement, and Support teams

- Transparency and accountability across both internal and external teams

- Time and cost efficiency by expediting implementation and training

CorSource Can Help
